

BUILT AROUND THE BIKE. DRIVEN BY CARE.

DELIVERING PASSION FOR PERFORMANCE

CHALLENGE

High-end motorcycles need special attention while being transported, as these powerful machines are both heavy and fragile. Parts can easily be damaged unless they are carefully packaged and loaded with extreme caution. 20Cube is trusted by leading automobile manufacturers (2-wheelers) to transport their exclusive models, including, in some cases, bikes that have yet to be revealed to the world, thanks to our:

- Customised handling process
- End-to-end visibility and real-time updates
- Zero tolerance of unauthorised access to new model images.

SOLUTION

Facility compliance

We have developed effective and secure operational processes, including quarterly fire safety drills, monthly pest control and annual third-party auditing via PWC to ensure our facilities are compliant. On entry, visitors are briefed by security guards about the strict prohibition of the sharing of facility information and images.

Individualised protection

All fragile parts are bubble-wrapped for extra protection, and the bikes are individually loaded and secured to ensure safe passage. In the unusual event of any damage occurring, we immediately notify customers, replacement parts are ordered in the presence of the officials and authorised technicians are available to remedy the situation as soon as possible.

APPROACH

Our process has been honed to ensure minimal risk of damage during loading, transporting and unloading. With complete transparency and end-to-end visibility, we offer complete peace of mind to our clients and their customers, who can be sure their investment is in the safest hands at every stage of its journey.
